

SB Connect

Client Feature Presentation

A business community portal for member profiles, opportunity requests, meetings, attendance, admin operations, and future payments.

No Politics Only Business

Product at a glance

SB Connect brings membership, business discovery, opportunities, attendance, and admin governance into one portal.

M

Member Portal

Secure login, profile setup, directory browsing, requests, chats, RSVPs, attendance, and deal recording.

B

Business Exchange

Members post requirements, pitch for work, award contracts, and track value generated in the network.

Q

Meeting Hub

Meeting announcements, RSVP, QR attendance links, attendance history, and compliance visibility.

A

Admin Console

Approvals, roles, meetings, notifications, issue reports, exports, audit reports, and health checks.

Who uses it?	What they do	Outcome
Members	Create profiles, find businesses, post needs, pitch, attend meetings	More business visibility and participation
Admins	Verify members, manage meetings, review reports, export data	Centralized community operations
Leadership	Review business value, attendance, activity, and roadmap	Better governance and growth decisions

End-user journey

A simple path from account creation to active business participation.

The app is designed as an operational member workspace, not a static brochure. Users land on the dashboard and immediately see membership status, requests, meetings, notifications, and quick actions.

Dashboard and daily member workspace

The dashboard gives members the most important actions and community signals in one place.

Dashboard

Membership

Requests

Notifications

Quick Actions

Create Request

Record Deal

Membership status

Shows active, expired, or inactive state plus renewal countdown.

Requests snapshot

Highlights own requests, open opportunities, and new request indicators.

Notifications

Unread alerts for issue resolution and new pitches.

Quick actions

Create request, view profile, and record business given.

Leaderboard

Ranks contributors by business value and deal count.

Meetings

Upcoming meetings, RSVP buttons, and attendance warnings.

Client value: members need fewer instructions because the dashboard continuously points them toward the next useful action.

Business profiles and member directory

Each member gets a searchable profile that represents their business inside the community.

Profile creation

Owner details, phone, company name, categories, size, location, email, website, and description.

Rich media

Profile photo plus up to five catalog files such as PDF or images.

Search signals

Categories, location, keywords, membership status, and verification badge.

QR sharing

Each profile has a QR-ready profile URL for offline networking.

Directory search	Member benefit	Admin benefit
Company name, category, keyword, location	Find credible vendors, partners, and service providers	Cleaner network visibility and stronger business matching
Verified and membership status badges	Trust signals while browsing	Governance is visible without extra explanation

Requests, pitches, and business value

The request marketplace turns member needs into trackable business opportunities.

Meetings, RSVP, and attendance

SB Connect supports recurring community meetings with digital attendance workflows.

Meeting creation

Admins create meeting date, label, location, active state, and QR attendance URL.

Member RSVP

Members respond Yes or No from upcoming meeting cards on dashboard.

Attendance marking

Members mark attendance or scan QR link; duplicate attendance is prevented.

Compliance

A six-month attendance rule checks whether a member attended at least three meetings.

End user	Admin	Leadership
Knows upcoming meetings and attendance history	Sees attendance and RSVP lists with CSV export	Tracks engagement and member participation
Receives warnings if compliance is low	Gets QR code for meeting attendance	Can align benefits with active participation

Communication, support, and notifications

The app includes direct messaging and a built-in issue reporting loop.

Member chat

One-to-one realtime conversations, unread counts, read status, and 30-day cleanup.

User notifications

New pitch alerts and issue resolution messages appear in the dashboard.

Report issue

Floating support button lets users submit page, subject, and issue description.

Resolution loop

Admins resolve reports and notify users with notes.

Why this matters to the client

Support is built into the operating experience. Members do not need a separate helpdesk link to report problems, and admins can close the loop from the admin panel.

Admin console and operations

Admins have one place to manage members, meetings, requests, reports, exports, and system health.

Approvals

Verify business profiles and manage pending members.

Requests

Close, delete, or award deals from business requests.

Meetings

Create meetings, view QR, RSVPs, attendance, and CSV exports.

Notifications

Publish announcements and meeting messages.

Issue Reports

Review, resolve, notify user, or delete submitted reports.

Audit & Health

Generate audit reports and run data/system diagnostics.

Webhook Sync

Export app data to webhook/Google Sheets automation.

Roles

Promote, view, and manage admin users.

Implemented controls and user experience

The interface uses familiar controls that support fast member workflows.

Control group	Examples	User value
Forms	Login, register, profile, request, meeting, webhook, issue report	Users can complete work without leaving the app
Selection	Category buttons, dropdowns, date inputs, filter pills	Simple filtering and structured data entry
Media	Photo upload, catalog upload, QR profile and attendance links	Profiles become richer and meetings work offline
Feedback	Badges, loading states, errors, success messages, notifications	Members understand status and next steps
Navigation	Desktop sidebar, mobile drawer, bottom navigation, clickable cards	Responsive use across desktop and mobile
Admin actions	CSV export, collapsible sections, confirmations, role tools	Operational tasks are organized and protected

Recommended next steps

The current app is a strong MVP; these additions would make it production-ready and easier to scale.

- 1 Complete payments** Finish Razorpay membership payments, renewals, receipts, and reconciliation.
- 2 Move sensitive actions server-side** Use Cloud Functions for role changes, attendance validation, deal awarding, and payment webhooks.
- 3 Add analytics** Dashboards for member growth, attendance trends, RSVP conversion, request closure, and deal value.
- 4 Strengthen data quality** Normalize money values, server timestamps, backend cleanup jobs, and stronger validation rules.
- 5 Expand testing** Automated tests for auth, profile, requests, duplicate prevention, attendance, and admin permissions.

Client takeaways

- SB Connect is ready to present as a practical membership and business networking MVP.
- The strongest user value is the combination of directory, requests, meetings, attendance, and deal tracking.
- Admin operations are broad enough for real community management, including support reports and data exports.
- The best next investment is production hardening: payments, backend validation, analytics, and tests.
